

## V1.9

ItemBound is a resource pack for **Minecraft: Java Edition** that allows in-game item customization in (mostly) vanilla Minecraft! The pack uses Optifine's Custom Item Textures feature to allow you to apply custom skins to items and armor by changing their display name. Use the bookmarks on the side to navigate the guide, learn how to set up ItemBound in Minecraft, and how to craft the custom items.

**IMPORTANT:** ItemBound is a resource pack, not a mod. If you're having issues using it alongside other mods, it's likely due to a conflict with Optifine, not ItemBound. I can't fix those sorts of issues. You can report mod conflicts on Optifine's issue tracker here:

<https://github.com/sp614x/optifine/issues>

If you have a suggestion, you can send me a PM or post a comment on Curseforge, PlanetMinecraft, or the Minecraft Forums. **PLEASE READ THE FAQ (Frequently Asked Questions) ON THE PROJECT PAGE FIRST THOUGH!** Chances are your idea may not be possible to implement, or is already in the pack.

## Introduction

Here is a general guide for setting up ItemBound. This can also apply to other Optifine-dependent resource packs.

Please be aware that this pack **requires** Optifine in order to work, as it uses non-vanilla features. Because Optifine is **required**, this pack will **only work on Java Edition**. It is currently **impossible to port it over to Windows 10 Edition or Pocket Edition**.

## Downloading and Installing

Downloading ItemBound is easy! Simply click the download/files button on the page you're downloading from to get it. Save it anywhere, and then copy it into your resource packs folder like any other resource pack.

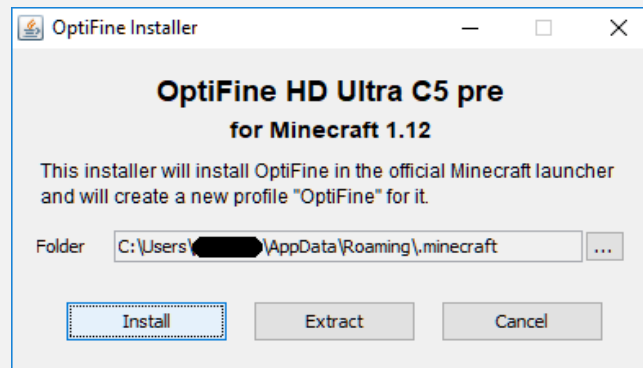

**PLEASE** only download it from the sites linked at the top of the guide. These are official sources where you can download it safely and reliably from.

Next, you need to install the correct version of Optifine for the version of Minecraft you're using. You can download it from [www.optifine.net](http://www.optifine.net)

Click "Downloads" and click on the most recent version for the version of Minecraft you're using. For instance, if you're using Minecraft 1.12.2, click the topmost link under Minecraft 1.12.2. You'll be prompted to download a .jar file and save it somewhere. If you're using Optifine alongside Forge, you'll need to check the individual changelogs beside each link to make sure you get the one that is compatible with your version of forge. This may not always be the most recent link, so check the versions carefully.

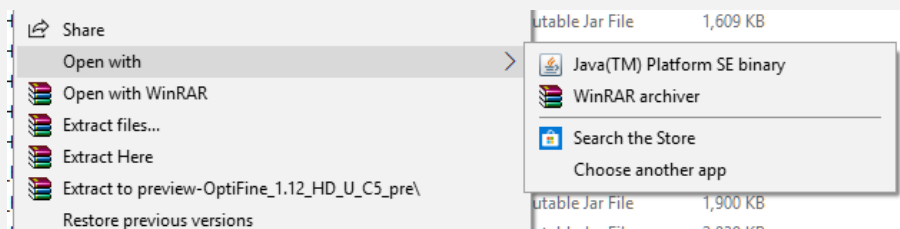

You may be shown an ad window before being taken to the download link. Just wait 5-10 seconds for the timer to run out and then click "**Skip Ad**" in the top right corner of the screen.

Before running the .jar file, make sure you've run Minecraft at least once on the version you wish to use Optifine on. Double click the .jar file and click "Install."

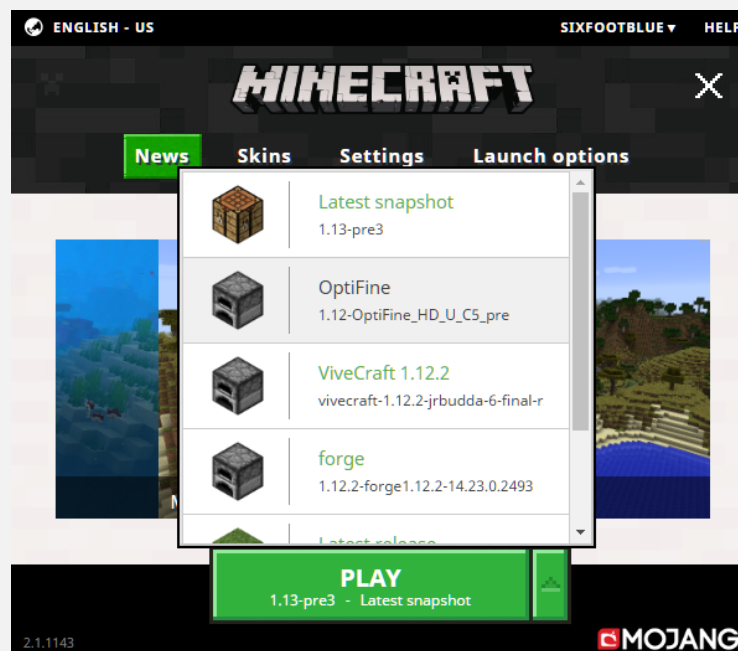

If you're using Forge, simply copy the .jar file into your mods folder.

If the .jar file won't open upon double clicking, try right clicking the file and select Open With > Java(TM) Platform SE Binary

You're done! Open up the launcher and choose the Optifine Profile you just created. Then load the resource pack.

## Crafting Items

Since this is just a resource pack, there are no conventional crafting recipes. Instead Optifine detects when an item is renamed on an anvil and, depending on what the name is, the texture will change. Be aware that some items may also require an enchantment in order to craft. Also some custom advancements may only trigger after an item has been obtained as loot as opposed to being crafted on an anvil.

## Server Use

ItemBound can be used on servers and multiplayer worlds as well! The custom textures are only clientside, so your worlds remain totally vanilla. The downside to this however is that no one else will be able to see the custom textures unless they also have the resource pack and Optifine installed on their end.

If you're a server owner, you can upload the resourcepack to a file hosting service such as dropbox and use the download link to implement it as a server resource pack. You'll still need to prompt your players to download and install Optifine though.

## Terms of Use

### You are free to:

- Use this pack on your server.
- Alter the pack for personal use.
- Combine with other packs for personal use and/or server play.
- Use this pack in youtube videos. (Credit is appreciated)

### Please credit and link to the pack if you:

- Use specific textures from the pack for public use. (Ask for permission)
- Include textures from the pack in your own public resource pack. (Ask for permission)

### You are **NOT** allowed to:

- Claim ownership over the textures in this pack.
- Reupload the entire pack elsewhere.
- Redistribute unedited individual assets from the pack without permission or credit.
- Redistribute edited assets from the pack without permission or credit.

## Troubleshooting

There are a number of reasons why ItemBound may not be working properly for you. The following aren't guaranteed solutions, but they should help in most situations.

- Make sure you've selected the correct profile.
- Make sure you're using the most recent version of Optifine for your version of Minecraft.
- Make sure the version of the pack you're using is compatible. (You can check compatible versions on the "Files" page of the curseforge page.
- Make sure ItemBound is near the top of your resource packs list.
- Make sure Custom Item Textures is enabled in your settings. (Options > Video Settings > Quality > Custom Items: ON)
- Check the Minecraft Game Output window for any errors with Optifine. You may have a mod conflict. (I can't fix these. Post about them on Optifine's Issue Tracker.)

## Books

In order to get a custom cover for written books, you must first sign your book with the desired title. Afterwards, place the written book in an anvil, and add the appropriate suffix to assign the colour or pattern. (Display names can be longer than book titles, so don't worry about leaving extra room for the suffix.)
